Green Way Liquid Ant Killing Bait incorporates boron (in the form of disodium octaborate tetrahydrate) in a special food bait which is highly attractive to ants, carpenter ants and cockroaches. Ants and carpenter ants pick up the bait and take it to their nests to feed the colony. Cockroaches will feed directly on the bait and die, but will not share the bait. The boron works slowly and sufficient bait should be made available for at least 14 days of continuous feeding. The ants and carpenter ants will return to their nests after consuming the bait and will feed their young and the queen, destroying the colony. Repeat placement of the bait until satisfactory control has been achieved.

Do not use sprays, foggers or any chemicals or cleaners near the bait containers or placements. This may contaminate the bait and cause the insects to cease feeding.

For control of ants, carpenter ants and cockroaches, use indoors or outdoors near homes, apartments and condominiums.

### **DIRECTIONS FOR USE:**

Green Way Liquid Ant Killing Bait may be used in devices that provide entry to ants, carpenter ants and cockroaches, but protect the bait from exposure to humans, domestic animals and the elements. The bait can dispensed in pre-filled bait stations, or can be used to refill ant and cockroach bait stations sold with the bait or in ant and cockroach bait stations designed for the addition of bait (Ant Café, Antopia, KM AntPro, Ant Café RTU (Ready To Use) or other similar bait stations).

[Green Way Liquid Ant Killing Bait must be used at full strength for control of cockroaches or carpenter ants. For other ant species, the volume of available bait may be increased by dilution with water or other food grade liquid 1:1 to make bait containing 0.5% active ingredient.]

[Green Way Liquid Ant Killing Bait Bait Station instructions: 1. To activate Green Way Liquid Ant Killing Bait Station, place station on a flat surface with the cone facing up. If cone is filled with liquid, move station from side to side rapidly and liquid will leave the cone. 2. Cut the top of the cone with scissors, so that the top of the remaining cone is level with top of surrounding circular surface. 3. Place bait station according to label directions. (Optional: illustrations of bait station activation).

Indoors: Place traps 1.5-3.0 metres apart where ants, carpenter ants or cockroaches are numerous. Replace bait stations as needed. Place stations under food cabinets, sinks, stoves, refrigerators, food storage areas, attics, garages, basements, storage areas and closets. Place on exterior windowsills and in doorways to help prevent entry of ants, carpenter ants or cockroaches. Some bait stations may be designed to be affixed to a wall or placed on a flat surface. When using bait stations, wash hands thoroughly before handling to remove any odours that may be repellent to ants, carpenter ants or cockroaches, i.e. tobacco, garlic, chemicals/ cleaners.

Outdoors: Place bait stations near where ants enter dwellings, and near ant-hills in lawns or gardens. For best results place stations in shaded areas or create shade for the bait station. Avoid placing bait station where it will receive direct sunlight whenever possible.]

### [ Antopia Bait Station –

For use around structures- The number of bait stations to use will vary with the type of ant and the size of the colony. For initial placement- Place one bait station every 15 metres (50 feet) around the structure to be treated. If any of the bait stations is emptied in less than a week, double the initial placement. Replace baits as needed till feeding activity ceases.]

[Green Way Liquid Ant Killing Bait may be used without an ant or cockroach bait station: In the House – make small, pea sized placements and/or long thin lines in areas inaccessible to children and pets, where ants, carpenter ants or cockroaches are a problem. In the Garden – Place a few drops of Green Way Liquid Ant Killing Bait on a smooth, firm surface and place on runs and nests.]

**PRECAUTIONS**: KEEP OUT OF REACH OF CHILDREN AND DOMESTIC ANIMALS. Avoid contamination of water, foodstuffs and utensils. Wash after use.

### **FIRST AID:**

IF SWALLOWED: Call a poison control centre or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control centre or doctor. Do not give anything by mouth to an unconscious person. IF ON SKIN/CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control centre or doctor for treatment advice. IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control centre or doctor for treatment advice.

IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible.

Take the container label or product name and Pest Control Product Registration Number with you when seeking medical attention.

**TOXICOLOGICAL INFORMATION:** Treat symptomatically.

**DISPOSAL:** Do not reuse empty container. Wrap empty container and discard in household garbage.

### **ANTOPIA**<sup>®</sup> Bait Station Operating Instructions

- If bait station tab locks are present and engaged, apply downward pressure with thumb and forefinger to release. Pull up on the green cover while lock is disengaged to expose the bait reservoir. To engage the lock, align the flat panels of the green cover with the clear cover guides and apply downward pressure until you feel the tab locks engage.
- Loosen the soil in the spot where you are going to place the station to width of about 3" and a depth of about 7" with a digging implement (a large screwdriver works suitably).
- Remove foil seal (if present) to expose the pre-filled bait station.
- If not prefilled, remove the Feeding Float to fill.
- Twist anchor clockwise into the soil until the entryway is level with the soil. If you encounter difficulty in seating the bait station properly, remove it and loosen the soil more thoroughly and repeat the anchoring process.
- Alternatively, dig a small hole to a depth of 7" and place the station in the hole, so that the entryway is level with the ground; replace soil and tamp to hold.
- Fill the station with liquid ant bait.
- Place Feeding Float on top of bait, centering the float in the chamber, aligned with three Feeding Float guides.

### **ANTOPIA® Bait Station Placement Instructions**

For best results, place stations in shaded areas or create shade for the bait station. Avoid placing bait station where it will receive direct sunlight whenever possible.

- For use around structures: The number of bait stations to use will vary with the type of ant and the size of the colony.
- For initial placement: Place one bait station every 15 m (fifty feet) around the structure to be treated.
- If any of the bait stations are emptied in less than a week, double the initial placement. Replace baits as needed until feeding activity ceases.

### To Reuse ANTOPIA® 6 Bait Station

If less than six months from first use, remove cover and add bait of the same type previously used.

If more than six months since first use or last cleaning, empty bait station completely, disposing of uneaten bait in accordance with label directions; fill bait station with mild bleach solution (1% chlorine) and allow to sit for at least one hour; empty bait station and dispose of rinsate properly; rinse bait stations several times with water or mild soap and water solution; dispose of rinsate properly and allow station to dry.

Add bait through top fill port; replace fill port cover and place station as directed.
