COVID-19

(2019-nCoV)

ACCORDING TO THE CDC (Center for Disease Control):

"The 2019 novel coronavirus (Covid-19) is a new virus that causes respiratory illness in people and can spread from person-to-person. This virus was first identified during an investigation into an outbreak in Wuhan, China."

DOING OUR PART

In the event of an epidemic, proper hygiene and cleaning is the first line of defense against the spread of infection. As a leader in the cleaning community, Safeblend takes this responsibility seriously.

'Clean Safely' isn't just about commitment to the environment, but extends to our efforts to provide you the tools to help reduce the risk of infection and the spread of pathogens.

SLOWING THE SPREAD OF INFECTION

The difference between cleaning, sanitizing and disinfecting

Cleaning involves the use of soap and water to remove germs and soil. Sanitizing kills or removes germs sufficiently that they are no longer a threat. Disinfecting is the use of chemicals to kill germs.

Clean/disinfect surfaces that are touched often

Surfaces such as doorknobs, desks, countertops, and anything else that is often touched should be routinely disinfected.

Stick to a cleaning/disinfecting routine

You don't need to clean/disinfect all surfaces, even in the case of an outbreak. Other processes like using deodorizers and wiping down walls are not recommended.

Follow proper cleaning instructions

Read and follow label instructions. Wash and rinse visibly dirty surfaces before applying disinfectant. Surfaces that are not visibly dirty, you can use products that clean and disinfect.

Make safety a priority

Use the appropriate PPE (Personal Protective Equipment). Read and follow directions and hazard warnings on product labels. Do not mix products unless labels indicate it is safe to do so.

Properly handle waste

Discard disposable cleaning items after use. Avoid contact with waste and use appropriate PPE (Personal Protective Equipment) when handling and emptying bins. Wash hands thoroughly after handling waste.

Stay informed

Visit the CDC website to stay access resources on slowing the spread of the infection and for information on the flu virus. [cdc.gov/flu](https://www.cdc.gov/flu)

coronavirus

COVID-19

(2019-nCoV)

Precautionary Measures (according to ISSA)

You can help prevent yourself from getting and spreading Covid-19-and other respiratory illnesses-by following these steps:

- Wash your hands often with soap and water for 20 seconds. Use 70% alcohol-based hand sanitizer if soap and water are not available.
- Avoid touching eyes, nose and mouth with unwashed hands.
- Avoid close contact such as kissing, hugging, and sharing cups or eating utensils with people who are sick.
- Cover your coughs and sneezes with a tissue or shirt sleeve, not your hands.
- Clean and disinfect frequently touched surfaces, such as toys and doorknobs, especially if someone is sick.
- Stay home when you are sick.

Saniblend Ready-to-use disinfectant

- Cleaner - **Disinfectant** - Detergent - Deodorizer - Fungicide - Mildewstat - Virucide - Tuberculosis
- Our **Saniblend RTU disinfectant and hard surface cleaner** has been confirmed by HealthCanada to have demonstrated **effectiveness against SARS-CoV** and is expected to **inactivate the 2019 Novel Coronavirus (2019-nCoV)**
- DIN #02344904
- Available in 4 L and 950 mL formats

Safeblend Hand Soaps / Ecologo Certified

Products Certified for Reduced Environmental Impact. View Specific Attributes Evaluated: UL.COM/EL UL 2759, 2777, 2784, and 2794.
