

KILL TICKS

Where Sprays Can't Reach

2022 = BAD YEAR FOR TICKS IN CANADA

- In 2022 the number of ticks that carry Lyme disease is expected to be higher than ever in much of Canada.
- With climate change, each tick season will be worse than the last. As the winters are getting milder and shorter, ticks are surviving better, and they have more time to feed and reproduce.
- Cases of tick-borne disease increased in Canada by 150 percent between 2020 and 2021.

MAXIMIZE TICK CONTROL & REVENUE

Add Tick Control Tubes to your spray program to increase backyard protection.

Strengthen Protection

Kills immature ticks
where sprays can't reach.

Increase Revenue

Complements
spray programs.

Easy Application

Apply in minutes.
No equipment needed.
