

BRIGAND

BROMADIOLONE BAIT

Bromadiolone is a second generation anticoagulant which is highly effective in the control of rats and mice. Brigand baits are ready-to-use and contain 0.005% w/w bromadiolone.

The toxicity profile of bromadiolone shows it is effective in the control of both rats and mice, requiring less than one third of their daily food consumption to ingest a lethal dose.

Average weight: 8.80 oz (250g)
Average daily consumption: 1.06 oz (30g)
Lethal dose (LD50): 0.20 oz (5.6g)

Average weight: 0.88 oz (25g)
Average daily consumption: 0.11 oz (3g)
Lethal dose (LD50): 0.03 oz (0.9g)

Anticoagulant baits work by reducing the ability of the rodent's blood to clot. As with all anticoagulants, accidental poisoning with bromadiolone can be antidoted with Vitamin K1.

A potent rat and mouse killer, Brigand demonstrates less toxicity to many non-target animals such as dogs, cats and birds:

	Approx. lethal dose* oz / lbs body weight	Approx. lethal dose* g / kg body weight
Dog	3.20	200
Cat	8.00	500
Chicken	16.00	1000
Pig	0.96	60

* This information provides an indication of comparative toxicity. Data is taken from a variety of industry and scientific sources and data from different researchers may vary. In case of accidental poisoning, always consult a physician or veterinary surgeon.

BRIGAND SB

SOFT BAIT RODENTICIDE

Brigand SB, a ready-to-use soft bait formulated specifically for the US market.

Produced using the highest quality ingredients including food grade wheat flour, chopped grain, soft lard and synthetic peanut flavoring, to produce a high calorie, high energy rodenticide.

Synthetic peanut flavoring enhances the attractiveness of the bait to the target rodent, while eliminating nut contamination and allergen risks.

Brigand soft bait is extremely palatable to both rats and mice and ideal for use in all situations, but especially those where rodents must be tempted away from other available food sources.

Brigand SB Packets

Brigand SB is available in 0.35oz (10g) packets which are easily secured in place (see product use guidelines), and sold in 18lb pails.

Product use guidelines

Best practice in rodent control is crucial to ensure the baits used are well protected from non-target animals, children and pets - bait stations should always be used.

Brigand SB (soft bait) can be easily secured inside all bait stations, reducing the risk of removal by rodents.

Step 1
Pierce bait with rod or wire.

Step 2
Load rod with desired weight - three packets equal 1oz.

Step 3
Place in bait station in secure location.
